Models

lab #lab04

James L. Parry
B.C. Institute of Technology

Lab Goals

The purpose of this lab is to help you explore and practice some of the model techniques from the models lesson.

Suggestion: you may want to skim the slideshow first, before working your way through it.

Lab Submission

Your lab will be completed in a github repository. This will be your (forked) starter-lab04 repo.

Please make sure that your work is in the "master" branch or your repository, and that any other branches have been merged into it.

Submit a readme to the lab dropbox. This readme should have a link to your github repository.

Due: Fri, Oct 16, 17:30 PST

Lab Marking Guideline

Part A addresses three models, and the corresponding changes to our two controllers.

The menu and orderitems models are trivial, and effectively done. The orders model is where most of the action happens. The orders model has five methods needed, for 1 mark each.

Making the welcome and order controllers work properly will get you 1 and 2 marks, respectively.

Proper repository branching and workflow make up the last 2 marks.

What Do We Do?

Complete tutorial "normal02 - working with models".

Congratulations!

You have completed lab #lab04: Models

If you would take a minute to provide some feedback, we would appreciate it!

The next activity in sequence is: basic05 Helpers and Addons

You can use your browser's back button to return to the page you were on before starting this activity, or you can jump directly to the course homepage, organizer, or reference page.
